

PIXEL STANDARDS

Your Data Check Six Pack has the brightest, sharpest LCD displays available, each with 118,000 pixels. This characteristic makes them ideal for a broad variety of confidence monitoring applications.

Our LCD's are purchased from the world's leading manufacturer. All LCD's however may exhibit an insignificant number of missing or discolored pixels. To assure our screens do not exceed established standards in this regard, we carefully inspect and "burn-in" each LCD.

For your information the specifications for the maximum number of missing or discolored pixels permitted are described below.

Should you believe your Data Check Six Pack does not conform to these specifications, please contact us at **818-373-5492** x200 or email: **Mail@datacheck.com**.

MAXIMUM MISSING/DISCOLORED PIXELS

ITEM	AREA-A	AREA-B	TOTAL
Blue, black	1	4	5
Red, green, white	0	2	2
Total	1	5	6

Area A (center) and B (border) refer to the following sections of the screen:
